

Via the Command Line Interface (CLI)

Use the following commands depending on the task you wish to perform:

```
> execute backup config management-station <comment>
```

Or:

```
> execute backup config usb <backup_filename> [<backup_password>]
```

Or for FTP (note that port number, username are optional depending on the FTP site):

```
> execute backup config ftp <backup_filename> <ftp_server> [<port>] [<user_name>] [<password>]
```

Or for TFTP:

```
> execute backup config tftp <backup_filename> <tftp_servers> <password>
```

If you have a VDOM-type of configuration, use the same commands by first entering the commands:

```
> config vdom  
> edit <vdom_name>
```
